PRINTING TECHNIQUES

Classic lamination is the most common imprint for a 4 color process bag. Basically, each color is printed on a film (clear for a glossy finish, frosted for a matte finish) and then the film is laminated unto the bag's material.

ChromaPrint is a print technique in which a sheet of aluminum foil is placed between the film and the bag's material. The aluminum gives a metallic effect (chrome or brushed metal) to the print. A white ink can be used on the film to mask the metallic effect on some areas of the print.

To make it simple, Glamprint is a selective varnish. It allows a combination of glossy and matte finish on the bag. Unlike selective varnish, it is however very hard to register accurately so it is better used to create a tone on tone effect.

Sublimation is a process where the artwork is mirror printed on a transfer paper. The paper is then pressed and heated against the material with a pneumatic press. The ink then evaporates and transfers onto the fabric where it solidifies itself.

PixiePrint is a print where metallic dust is mixed with the silkscreen ink to give a glitter effect to the print. This technique almost costs the same price as a regular ink but gives a much more spectacular result.

Silkscreen printing is a technique where an ink blocking stencil is used to transfer the ink on the fabric. A squeegee is used to force the ink past the opened area of the stencil which results into a complete printed artwork. It is by far the most economic decorating option.

Hot Stamping is achieved by stamping a film, either of metallic color or with an holographic pattern, unto the material. A steel stamp shaped like the final artwork must be molded to enable a perfect imprint of the vectorial artwork.

Laser engraving is a technique where a layer of fabric is burnt with a laser to create a classy tone on tone effect

MATERIALS

New (Exclusive)

COTL - Laminated Cotton

Laminated cotton combines the elegance of the cotton material with the strength of a laminated bag.

NCS-CROSS STITCHES

The cross stitches options gives a classy look, you can apply it on the PP Non Woven material to make a quilted effect.

NEO-EMBOSS

Neoprene emboss gives a luxurious look to your laptop sleeves, lunch bags and pouches.

FEL (FELT-RPET) 80-85% recycled fabric

Felt Rpet is a classy look material. It is made from RPET and it's 100 % recyclable.

Synthetic Fibers (Recyclable)

WOV - Polypropylene Woven (PP Woven) 20-60% recycled fabric

PP Woven is polypropylene strips that are woven together and then laminated to give a very sturdy and plasticity material.

NWV - Polypropylene Non-Woven (PP Non-Woven) - 20-60% recycled fabric

PP Non Woven is a more flexible and 'fabric like' material made from drops of polypropylene pressed together.

PET - Recycled Polyethylene Terephthalate (RPET) - 80-85% recycled fabric

PET or RPET is a fabric usually made from recycled pop bottles that is very soft. It has the higher recycled content of all eco fabrics.

RNL - RPET Nylon - 80-85% recycled fabric

RPET Nylon is RPET with a very fine weave to make it feel like Nylon.

RNW - RPET Non-Woven - 80-85% recycled fabric

RPET Non Woven is a flexible and 'fabric like' material made from drops of RPET material pressed together.

This material can be print in sublimation (4 color process without lamination). It is a very ecologic option.

Synthetic Fibers (Not Recyclable)

NEO - Neoprene

Neoprene is a synthetic rubber that is often referred to as "wet suit material". It is primarily used in laptop sleeves, lunch bags and pouches.

NYL - Nylon

Nylon is a waterproof thermoplastic weave that can be used in a wide range of clothing, accessories and bags.

POL - Polyester

Polyester is the most widespread textile in the regular bags and backpack industry because of its cheap price and strong durability.

PUR - Polyurethane

Polyurethane is mainly use as a faux leather. It is a strong material available in many different textures.

Natural Fibers (Biodegradable)

JUT - Jute

Jute is a coarse, very strong and durable vegetable fiber. It usually comes in natural color but can also be dyed any color.

JNW - Jute Non-woven

Jute non woven is made from shredded jute and PP non woven mixed together to make a softer fabric.

COT - Cotton (also available in Organic Cotton)

Cotton is probably the most know fabric. It is a soft, breathable fabric that can be dyed any color.

Gusset - The side or bottom panel of a bag. The gussets allows the bag to carry more volume

Construction - Construction is the way the bag is sewn. Most bags would either have a 1 gusset construction that wraps the sides and bottom in 1 panel or a 2 gussets construction where the front, back and bottom are 1 piece of fabric and a gusset is sewn on each side.

Binding - The tape that covers the raw edge of the bag. Adding a binding reinforce the seams of the bag.

Lining - A second layer of fabric that completely covers the interior of the bag, with the finished side facing toward the interior of the bag, and all seam allowances layered between the exterior fabric and the lining.

Underlining - Underlining is the process of adding a piece of stiff fabric between 2 layers of fabric to reinforce the sewing point. Mostly used to reinforce handles and shoulder straps on heavy duty bags.

Cross stitching - Padded ultrasonic stitching that creates a quilted effect

Ultrasonic - Heat stitching (no thread is used) that melts 2 layers of fabric together to form a seam.

Tube handles - Handles padded with a smooth plastic tube and covered with webbing. Tube handles offer a much more comfortable grip.

X stitching - A cross pattern forming a "X" shape to reinforce a sewing point

Foldover bindings - A method of reinforcing the bindings. The bindings are given an extra length (about 1") and are then folded down at the top of the seam and then double sewn. This method allows the bindings to be much stronger than regular straight cut bindings.

Zigzag Stitch - This common machine sewn stitch has a variety of uses. Built in on most sewing machines, it's formed when the needle swings from side to side as the stitches are formed, and can usually be varied by adjusting the stitch width and/or length.

Double Stitch - A sewing method where two pieces of fabric are sewn once, then sewn again a short distance into the seam allowance. This technique is used in areas that will be under heavy stress.
